# NetLinx® NX Integrated Controller

NX-4200 (FG2106-04)

## Overview

The NX-4200 / NetLinx® NX Integrated Controller is a programmable network appliance specifically designed to control AV and building technology using multiple analog and digital formats. The NX-4200 provides a scalable platform for the future by combining high performance, backward compatibility and extensive network security features. With its front panel display, built-in Ethernet switch and PoE capability, the NX-4200 is the ideal solution for demanding, technology-rich environments. The NX-4200's all-in-one architecture also delivers the lowest Total Cost of Ownership in the industry, thanks to ease of support, maintenance and configuration, as well as reduced hardware and cabling costs.

## Common Applications

- NX Master Security firmware is ideal for enterprise, education, and government policies requiring secure communication over a computer network in line with security standards expected by the IT industry of any equipment running on an enterprise.
- The NX-4200 is geared to meet the high-end control and automation requirements of the most sophisticated and complex business, educational and residential installations. With its generous number of ports, security features and Ethernet switching options, the NX-4200 is ideal for any large installation requiring stringent security measures.
- With redundant power, built in Ethernet switch and enhanced security features like Dual NIC with POE, the NX-4200 provides versatility with the ability to integrate the largest number of devices in the NX Series of Integrated Controllers, including projectors, lighting, DVD and Blu-ray players, thermostats and other electronic equipment.

## Features

- **Front Panel Display** – Features an LCD display on the front panel, making it easy to view status information, network settings, IP addresses & ICSLan Port status, among others
- **Redundant Power Source** – The NX-4200 can be powered either with a connection to mains AC power (110/220VAC) or from an external 12V DC power supply. If the AC input power is lost or if the internal power supply fails, the NX-4200 will immediately switch to the 12V DC power input without interruption except to PoE devices on the ICSLan
- **Dual NIC with Power** – Enables two discrete network interfaces for unrivaled security and includes a 4 Port switch with PoE allowing you to power PoE devices over a secure, isolated network. The LAN port is used to connect the master to an external network, and the ICSLAN ports connect to AMX or third-party A/V equipment isolated from the primary network
- **IPv6** – Supports Internet Protocol version 6 (IPv6), the communications protocol that provides an identification and location system for computers on networks and routes traffic across the Internet

- **IEEE 802.1X** – Supports IEEE Standard for Port-based Network Access Control with the ability to grant or deny network access to devices wishing to attach to a LAN based on credentials tied to the device rather than to a user
- **X.509 Certificate Services** – NX supports customer-provided certificates for access to protected networks.
- **Full LDAP Integration** – Supports multiple user-defined login groups for accessing the master, as well as provides an AMX programmer the capability to require network login to access certain areas of the touch panel
- **High Performance Architecture, Flexible Programming Platform (RPM, NetLinx and Java)** – Easily scalable to support a wide range of applications for today and tomorrow
- **Full Line Compatible (Backwards and Cross-Compatibility)** – Standardized port numbers and new configuration import/export tools mean fewer coding changes
- **TLS / SSH Client** – Provides NetLinx programmers the ability to manage secure port TLS and SSH communications with a remote device or server
- **Cryptographic Support** – In accordance with FIPS 140-2, a U.S. government computer security standard used to accredit cryptographic modules for the protection of sensitive or valuable data
- **Network Syslog** – The Central Controller generates an audit record of events using syslog, a standard for message logging
- **Enhanced Diagnostics On Serial and IR Ports** – Provides real time error feedback when Serial and IR ports are disconnected or improperly wired
- **File Import / Export From USB Drive** – Backup and restore configuration data, program files, and update firmware from a standard USB flash drive

#### Additional Features
